RT nucleatum strain ATCC 25586 i.,

RT CAPALTYTIC ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP + Dhosphate + L-glutamate + carbamoyl phosphate.

C. I CARCTOR: Binds 3 manganese ions per subunit (By similarity).

C. I PATHWAY: Pyrimidine biosynthesis; first step.

C. I PATHWAY: Pyrimidine biosynthesis; the small (or glutamine) chain

promotes the hydrolysis of glutamine to ammonia, which is used by the large (or ammonia) chain to synthesize carbamoyl phosphate (By similarity).

 ö
 -!- FUNCTION: Involved in the regulation of carbon partitioning in the leaves of plants. May regulate the synthesis of sucrose and therefore play a major role as a limiting factor in the export of photoassimilates out of the leaf.
-!- CATALYTIC ACTIVITY: UDP-glucose + D-fructose 6-phosphate = UDP +
 SUCTORE 6-phosphate.
-!- ENZYME REGULATION: Activity regulated by phosphorylation and moderated by concentration of metabolites and light.
-!- PATHWAY: Sucrose synthesis.
-!- SUBUNIT: Homodimer or homotetramer (By similarity).
-!- PTM: Phosphorylated, However, phosphorylation is not essential for enzyme function (By similarity).
-!- SIMILARITY: Belongs to the glycosyltransferase family 1.

Anablodopsis.;

Parablodopsis.;

Plant Cell 10:1861-1874(1998).

-I- FUNCTION: Disease resistance protein. Resistance proteins guard
the plant against pathogens that contain an appropriate avirulence
protein via an indirect interaction with this avirulence protein.

That triggers a defense system including the hypersensitive
response, which restricts the pathogen growth. In contrast to
RPB9, it does not specifically recognize the Emco5 avirulence
protein from Perchospora parasitica.

NISCELLANEOUS: In cv. Columbia and cv. Di-17 this protein is not
present due to an unequal rosssing over between the RPP8 and RPBHA

PRESENT SHORMENTY: Contains 1 the disease resistance NB-LRR family.

RPB9/RHT subfamily.

SIMILARITY: Contains 1 NB-ARC domain.

-I- SIMILARITY: Contains 1 NB-ARC domain.

```

Brunck TK;

Claim 17; Page 64; 69pp; English.

The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoande peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus

 ö
 Mycoplasma pulmonis.";

Nucleic Acids Res. 29:2145-2153(2001).

-I-FUNCTION: This protein binds directly to 23s ribosomal RNA and is necessary for the in vitro assembly process of the 50s ribosomal subunit. It is not involved in the protein synthesizing functions of that subunit (By similarity).

-I- SIMILARITY: Belongs to the L20P family of ribosomal proteins.

Hepatitis C virus NS3/NS4a serine protease inhibitor peptide #41

08-CCT-2002

ABB80561;

쉱

```
The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus

ROBENTAL ACTIVITY 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP + L-GORACTOR: Binds 3 mangarese ions per subunit (By similarity).

RATHWAY: Pyrimidine biosynthesis; first step.

RATHWAY: Pyrimidine biosynthesis; first step.

ROBENTI: Composed of two chains; the small (or glutamine) chain

Promotes the hydrolysis of glutamine to ammonia, which is used by the large (or ammonia) chain to synthesize carbamoyl phosphate (By Similarity).

 FUNCTION: This protein is involved in the repair of mismatches in DNA. It is required for dam-dependent methyl-directed DNA mismatch repair. May act as a "molecular matchmaker", a protein that promotes the formation of a stable complex between two or more promotes the formation of a stable complex between two or more DNA-binding proteins in an ATP-dependent manner without itself being part of a final effector complex (By similarity). SIMILARITY: Belongs to the DNA mismatch repair mutt/hexB family.

GENERAL INFORMATION:

APPLICANT: Haigler, Candace H.

APPLICANT: Haigler, Candacy H.

APPLICANT: Haigler, Societ

TITLE OF INVENTION: EXPRESSION OF SUCROSE PHOSPHATE SYNTHASE

TITLE OF INVENTION: EXPRESSION OF SUCROSE PHOSPHATE SYNTHASE

TITLE OF INVENTION: US/09/394,272

CURRENT APPLICATION NUMBER: US/09/394,272

CURRENT FILING DATE: 1999-09-10

NUMBER OF SEQ ID NOS: 14

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 4

LENGTH: 1081

TYPE: PRT

TYPE: PRT

CRACINISM: Craterostigma plantagineum

US-09-394-272-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 11, Application US/09394272;
Sequence 11, Application US/09394272;

FUBLICATION NO. US20020068702A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Corves International, Inc.
APPLICANT: Lim-Wilby, Marguerita
APPLICANT: Levy, Odile B
APPLICANT: Levy, Odile B
APPLICANT: Brunck, Terence K
TITLE OF INVENTION: NOVEL PEPTIDES AS NS-3-SERINE PROTEASE INHIBITORS OF HEPATITIS C
TITLE REFERENCE: IN01192-US
CURRENT APPLICATION NUMBER: US/09/909,164
CURRENT FILING DATE: 2003-03-25
PRIOR APPLICATION NUMBER: 60/220,101
PRIOR APPLICATION NUMBER: 60/220,101
NUMBER OF SEQ ID NOS: 62
SOPTWARE: PATENTIN Version 3.1
APPLICANT: Levy, odile E

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description: catalyzes formation of sucrose-6-phosphate from UDPglucose and D-fructose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tobacco yello
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A;Pathway: sucrose biosynthesis
C;Superfamily: sucrose-phosphate synthase; sucrose/sucrose-phosphate synthase homology
C;Reywords: glycosyltransferase; hexosyltransferase; sucrose biosynthesis
P;1-341/Domain: sucrose/sucrose-phosphate synthase homology (fragment) <SSPS>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Experimental source: fruit, cv. Miyagawa-Wase
Note: the nucleotide sequence was submitted to the EMBL Data Library, August 1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Accession: S72649;
Status: nucleic acid sequence not shown
Molecule type: mRNA;
Residues: 1-341 < KCM>,
Cross-references: EMBL: AB006319; NID: 92588891; PIDN: BAA23215.1; PID: 92588892

                                                                                                                                                                                                                                                                                                                                                                                      Jene 170:217-222(1996).

-!- FUNCTION: Involved in the regulation of carbon partitioning in the leaves of plants. May regulate the synthesis of sucrose and therefore play a major role as a limiting factor in the export of photoassimilates out of the leaf.
-!- CAPALYTIC ACTIVITY: UDP-glucose + D-fructose 6-phosphate = UDP + sucrose 6-phosphate.
-!- ENZYME REGULATION: Activity regulated by phosphorylation and moderated by concentration of metabolites and light.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- PATHWAY: Sucrose synthesis.
-!- SUBINIT: Homodimer or homotetramer (By similarity).
-!- PTW: Phosphorylated. However, phosphorylation is not essential for enzyme function (By similarity).
-!- SIMILARITY: Belongs to the glycosyltransferase family 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                  (UDP-glucose-fructose-phosphare glucosyltransferase).

                                                                                                                                                                                                                              -i- PATHWAY: Sucrose synthesis.
-i- SUBDNIT: Homodimer or homocetramer (By similarity).
-i- PTM: Phosphorylated. However, phosphorylation is not essential for enzyme function (By similarity).
-i- SIMILARITY: Belongs to the glycosyltransferase family 1.

MEDLINE=0 a maize sucrose Hosphate synthase in tomato alters

leaf carbohydrate partitioning.";

Plant Cell 3:1121-1130(1991).

I. Plant Cell 3:1121-1130(1991).

I. PUNCTION: Involved in the regulation of carbon partitioning in the leaves of plants. May regulate the synthesis of sucrose and therefore play a major role as a limiting factor in the export of photosesimilates out of the leaf.

CATALYTIC ACTIVITY: UDP-glucose + D-fructose 6-phosphate = UDP + sucrose 6-phosphate.

CATALYTIC ACTIVITY: UDP-glucose + D-fructose 6-phosphate and and moderated by concentration of metabolites and light.

CHOMEN AND ACTIVITY CONCENTRATION: ACTIVITY regulated by phosphorylation and moderated by concentration of metabolites and light.

CHOMEN AND ACTIVITY CONCENTRATION: ACTIVITY PROGRAMMAN: Sucrose Synthesis.

CHOMEN AND ACTIVITY ACTIVITY PROGRAMMAN: Sucrose Synthesis.

CHOMEN AND ACTIVITY ACTIVITY PROGRAMMAN: Sucrose Synthesis.

To be compound every and embryo development, and plays a role in compound eye assembly and cogenesis respectively. In the role in compound eye assembly and cogenesis respectively. In the raval eye disks, cells outside the assembling facets require this protein for short-range cell interactions that prevent the mystery cells from becoming photoreceptors. It is also required for muclear migration and cellularization in early embryogenests and could play a role in pole cell determination, development or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=22426069; PubMed=12337572; Matthews B.B., Campbell K.S., Misra S., Crosby M.A., Mungall C.J., Matthews B.B., Campbell K.S., Hradecky P., Huang Y., Kaminker J.S., Millburn G.H., Prochnik S.E., Smith C.D., Tupy J.L., Whitfield E.J., Bayraktaroglu L., Berman B.I Bettencourt B.R., Celniker S.E., de Grey A.D.N.J., Drysdale R.A., Harris N.L., Richter J., Russo S., Schroeder A.J., Shu S.Q., Stapleton M., Yamada C., Ashburner M., Gelbart W.M., Rubin G.M.,

-!- TISSUE SPECIFICITY: Eye disks and ovaries.
-!- DEVELOPMENTAL STAGE: Expressed both maternally and zygotically.
-!- SIMILARITY: Belongs to peptidase family C19.
            -!- CATALYTIC ACTIVITY: Ubiquitin C-terminal thiolester + H(2)0 = ubiquitin + a thiol.
-!- ALTERNATIVE PRODUCTS:

-1. FUNCTION: Participates in electron transfer between P700 and the cytochrome bef complex in photosystem I.

-1. SUBCELLULAR LOCATION: Loosely bound to the inner thylakoid membrane surface in chloroplasts.

-1. SIMILARITY: Contains 1 plastocyanin-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           [1] — SEQUENCE FROM N.A.

-! MISCELLANDOUS: In cv. Columbia and cv. Landsberg erecta, RPPB specifically recognizes the Emcos avirulence protein from Peronospora parasitica, while it is not the case in cv. Di-17, where it confers resistance to Turnip Crinkle Virus uppon recognition of the viral capsid protein.
-! SIMILARITY: Bongs to the disease resistance NB-LRR family. RPPB/HRT subfamily.
-! SIMILARITY: Contains 2 leucine-rich (LRR) repeats.
-! SIMILARITY: Contains 1 NB-ARC domain.
-! DATABASE: NAME-NIB-LRRS,
NOTE-Functional and comparative genomics of disease resistance gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note=Has been shown to exist only in cv. Columbia so far;
Note=Has been shown to exist only in cv. Columbia so far;
Note=Has been shown to exist only in cv. Columbia so far;
DOMAIN: The LRR repeats probably act as specificity determinant of
pathogen recognition.

POLYMORPHISM: The strong polymorphisms present in cv. Di-17 and
cv. Columbia are probably due to an unequal crossing-over between
the highly related RPBs and RPHBA genes present in cv. Landsberg
erecta. Such variations probably modify the specificity of

And Control 10:1861-1874(1998).

1. Plant Cell 10:1861-1874(1998).

2. I PROCITION: Disease resistance protein. Resistance proteins guard the plant against pathogens that contain an appropriate avirulence protein via an indirect interaction with this avirulence protein. That triggers a defense system including the hypersenative response, which restricts the pathogen growth. In contrast to RPPB, it does not specifically recognize the Emco5 avirulence protein from Peronospora parasitica.

2. INSTRILANBOUS: In cv. Columbia and cv. Di-17, this protein is not present due to an unequal crossing over between the RPPB and RPBHA genes that creates a unique RPPB gene.

3. INILANITY: Belongs to the disease resistance NB-LRR family.

3. SIMILANITY: Contains 2 leucine-rich (LRR) repeats.

4. SIMILANITY: Contains 1 NB-ARC domain.
